

CountBuddy

Give counting teams a clear route from stock list to reviewed result.

Who it fits

Inventory-software providers, retailers and operational service businesses with an existing route to stock-counting teams.

The commercial opportunity

Bring item imports, barcode identification, mobile counts, recounts and supervisor review into one organised workflow.

A proposed software asset acquisition or defined licence covering CountBuddy's agreed application and operating materials.

Explore the workflow

- A real isolated recording: CSV catalogue import, a new count, variance review and matching export.
- Fictional input and output CSVs accompany the recording; expected stock was already seeded.

Define what transfers

- Agreed application, interface, data schema, tests and documentation for counting and import/export workflows.
- Permitted brand assets and a specified environment and handover scope.

Agree the handover

30 calendar days after agreed workflow acceptance, capped at 20 hours, including a setup runbook, two sessions and one buyer rehearsal.

Screens and samples demonstrate the workflow, not completed buyer-environment or provider acceptance. Domains, provider accounts, third-party rights and any integrations are agreed separately; customer data and revenue are not included by implication.

Discuss CountBuddy for your market

Tell Mitch who would use CountBuddy and which counting journey you would like to see demonstrated.
