

RAMSNow

Bring structure to safety-document preparation.

Who it fits

Businesses serving contractors, trades and site teams, with the capability to support competent safety-document review.

The commercial opportunity

Move from a job brief to structured risk-assessment and method-statement drafts, with review and PDF output in the workflow.

A proposed software asset acquisition or defined licence covering the agreed RAMSNow application and document-generation materials.

Explore the workflow

- A product-screen view of the job brief and a fictional document walkthrough.
- A locally rendered synthetic PDF layout example, clearly marked NOT FOR SITE USE.

Define what transfers

- Agreed application, data schema, documentation and PDF-generation implementation.
- Specified seller-owned templates, hazard materials and brand assets, subject to a rights review.

Agree the handover

30 calendar days after technical acceptance, capped at 20 technical hours, including two sessions and a buyer rehearsal. Professional safety review is separately assigned.

A competent person must review and approve real documents for the actual task and site. The synthetic example is not an approved risk assessment or production acceptance proof. Third-party services and compliance responsibilities remain separately defined.

Discuss RAMSNow for your customers

Tell Mitch about your contractor audience and the document journey you want to explore.
